UNIVERSIDAD NACIONAL DE LA PLATA

(1936)

PRESIDENTE

INGENIERO JULIO R. CASTIÑEIRAS

VICEPRESIDENTE

DOCTOR HÉCTOR DASSO

SECRETARIO GENERAL

ABOGADO BERNARDO ROCHA

Consejeros titulares : DOCTOR ORESTE ADORNI, INGENIERO FÉLIX AGUILAR, INGENIERO AGRÓNOMO SANTIAGO BOAGLIO, DOCTOR ALFREDO D. CALCAGNO, DOCTOR HÉCTOR DASSO, DOCTOR JOAQUÍN FRENGUELLI, DOCTOR EDUARDO GIUFFRA, INGENIERO ENRIQUE HUMET, DOCTOR HILARIO MAGLIANO, DOCTOR AGUSTÍN PARDO, DOCTOR ANTONIO G. PEPE, DOCTOR JUAN CARLOS RÉBORA, PROFESOR FRANCISCO ROMERO, INGENIERO AGRÓNOMO SANTOS SORIANO, DOCTOR CARLOS J. B. TEOBALDO, PROFESOR MILCÍADES ALEJO VIGNATI y DOCTOR ENRIQUE V. ZAPPI.

Consejeros suplentes : DOCTOR LEÓNIDAS ANASTASI, INGENIERO EVARISTO ARTAZA, DOCTOR DIEGO M. ARGÜELLO, PROFESOR RAFAEL ALBERTO ARRIETA, DOCTOR ÁNGEL BIANCHI LISCHETTI, DOCTOR ÁNGEL CABRERA, INGENIERO ANTONIO ESCUDERO, DOCTOR LUIS J. GUERRERO, DOCTOR EUGENIO A. GALLI, DOCTOR FAUSTINO J. LEGÓN, DOCTOR NATALIO LOGIUDICE, INGENIERO AGRÓNOMO JUAN C. LINDQUIST, INGENIERO AGRÓNOMO JUAN B. MARCHIONATTO, DOCTOR GUIDO PACELLA, DOCTOR TRIFÓN UGARTE.

Representantes de los alumnos, Titulares : SEÑORES ENRIQUE ORTEGA y EUGENIO ZUBASTI.

OBSERVATORIO ASTRONÓMICO

DIRECTOR

INGENIERO FÉLIX AGUILAR

SECRETARIO

AGRIMENSOR CARLOS ALBARRACÍN SARMIENTO

Profesores Extraordinarios de la Escuela Superior de Ciencias Astronómicas y Conexas : INGENIERO FÉLIX AGUILAR, DOCTOR BERNARDO H. DAWSON, INGENIERO VIRGINIO MANGANELLO.

Extraordinario-Adjunto : INGENIERO SIMÓN GERSHÁNIK

PERSONAL CIENTÍFICO Y TÉCNICO

Jefes de Departamento : DOCTOR BERNARDO H. DAWSON, INGENIERO VIRGINIO MANGANELLO, INGENIERO NUMA TAPIA, DOCTOR ENRIQUE GAVIOLA (interino).

Astrónomo de Primera : AGRIMENSOR HUGO A. MARTÍNEZ.

Astrónomos de Tercera : INGENIERO MIGUEL A. AGABIOS, SEÑOR JUAN JOSÉ NISSEN.

Geofísico de Segunda : INGENIERO ENRIQUE LEVIN.

Geofísico de Tercera : INGENIERO SIMÓN GERSHÁNIK.

Ayudantes Astrónomos : SEÑOR MARTÍN DARTAYET, SEÑOR SILVIO MANGANELLO.

Calculistas : SEÑOR CARLOS U. CESCO, SEÑOR JORGE A. GARBARINO, SEÑOR JOSÉ MATEO.

Calculistas Ayudantes : SEÑOR RICARDO LUIS LASSALLE, SEÑOR MIGUEL ITZIGSOHN, SEÑOR TOMÁS LYNCH DILLON.

Preparador de sismología : SEÑOR JULIO LENZI.

Mecánico especialista : SEÑOR GREGORIO PLOTNIKOFF.

2123 ESTRELLAS DEL CATÁLOGO DE BOSS

COMPRENDIDAS ENTRE — 15° Y — 80°

El catálogo contiene casi todas las estrellas del *Preliminary General Catalogue* de Boss comprendidas entre — 15° y — 80°, observadas por el astrónomo Hugo A. Martínez con el Círculo Meridiano Gautier provisto de micrómetro impersonal de Repsold.

Se empleó el reloj de péndulo Riefler nº 325 y excepcionalmente el Riefler nº 468 instalados en los sótanos del edificio central, mantenidos a presión y temperatura constantes. El registro de los pasos de estrellas y del reloj se hizo en un cronógrafo Favarger de cilindro con dos plumas fuente.

El valor empleado de una revolución del tornillo micrométrico en ascensión recta es de 3:258; el del tornillo en declinación es de 14".58.

Para la obtención de los datos meteorológicos se utilizó el barómetro Fortin nº 2571 y el termómetro centígrado nº 126. El barómetro estaba instalado en la sala contigua a la del Círculo Meridiano con el cero de la escala a 16 metros sobre el nivel del mar. El termómetro permanecía durante las observaciones en la abertura de la sala meridiana a 3 metros de altura sobre el piso. El ancho de la abertura de la sala es de 1.15 metros.

El programa normal de una noche de observación comprendía cuatro horas de trabajo en las que se observaban dos parejas de circumpolares, cada una con estrellas en ambas culminaciones. Se incluían entre 18 y 20 estrellas fundamentales tomadas de *Positions and proper motions of 1504 standard Stars for the equinox 1925.0* de Eichelberger.

En las observaciones de pasos se seguían las estrellas con el micrómetro impersonal movido a mano durante tres revoluciones completas.

La colimación se determinaba mensualmente, por inversión sobre la mira colocada a 140 metros, al terminar la observación de la noche que precedía al cambio de programa.

Para determinar la inclinación se leía siempre la mira al principio y fin de cada noche. El nadir se observaba sólo al final, porque durante las primeras horas las vibraciones del baño de mercurio no permitían mediciones seguras.

Para las declinaciones se hacía cuatro bisecciones con el micrómetro, dos antes y dos después de la observación en ascensión recta, en posiciones simétricas respecto del centro y a 10 y 18 segundos de distancia.

Se leyó siempre los cuatro microscopios del pilar del Este. En las observaciones de las fundamentales se hizo dos lecturas del trazo de cada microscopio y una sola para las restantes estrellas.

Para el cálculo de las ascensiones rectas se leyeron 20 contactos, 10 a cada lado de la rotación central.

El run de los microscopios se determinaba al principio y fin de cada noche. Los datos meteorológicos eran tomados cada hora.

Las refracciones han sido calculadas en base a las tablas de Albrecht, *Formeln und Hilfstafeln*, 4^a edición, 1908.

Las correcciones de trazo han sido aplicadas a todas las estrellas según los valores dados en el tomo VI, entrega 4^a, de las *Publicaciones*, de este Observatorio.

Las magnitudes de las estrellas que figuran en el Catálogo han sido tomadas directamente del *Preliminary General Catalogue*, de Boss.

En la tabla I se da los errores medios de los resultados finales de las posiciones estelares en ambas coordenadas. Cada valor particular que figura es el promedio de los errores medios de dos estrellas, las dos primeras de cada hora para cada grupo en declinación.

En la tabla II se da los resultados de la comparación La Plata-Eichelberger de las estrellas comunes en los dos catálogos, tomando en cuenta los movimientos propios dados en Eichelberger. Los números son los correspondientes a Boss.

La tabla III se refiere a las correcciones a introducir a Boss para llevarlas a La Plata; en la zona de 70° a 80° para ascensiones rectas y en las horas 7.5 a 10.5 y 10.5 a 13.5 no se tomaron en cuenta las estrellas 2643 y 3469 (números de Boss) por tener diferencias muy fuertes, siendo éstas de $+1^{\circ}52$ y $-1^{\circ}75$, respectivamente.

El trabajo se inició en enero de 1932 siendo ayudante el señor J. J. Nissen quien desempeñó esta tarea hasta agosto del mismo año, durante ese tiempo se realizó un tercio del total del trabajo. Lo reemplazó el ingeniero Miguel Agabios que continuó hasta la terminación de las observaciones en julio de 1934.

Los cálculos han estado a cargo del astrónomo Martínez y en ellos han intervenido el ingeniero M. Agabios en pequeña parte, el señor J. Garbarino durante todo el trabajo y los señores S. Mangariello y A. Baldini en la parte final. La señorita G. Martín confeccionó el manuscrito.

HUGO ARTURO MARTÍNEZ.

La Plata, octubre de 1936.
